

Scope: Task addition, task deletion, task modification, task completion marking

Roles: Test Administrator and Quality Assurance Tester

Methodology: The testing methodology will be using predefined test cases in order to perform manual unit testing in order to test each feature of the website.

Testing Environment:

The testing environment will be on a local environment such as Chrome or Firefox.

Test Cases:

Number	Action	Expected Outcome	Actual Outcome	Result Pass/Fail
1	Add a task	Task should be added	Task added	Pass
2	Add empty task	Task should not be added and a message should show	Not added and warning shown	Pass
3	Delete task	Task should be removed	Task removed	Pass
4	Mark task completed	Task should be crossed out with check symbol	Task crossed with check	Pass
5	Edit existing task	Task should be updated	Cannot edit	Fail
6	Add super long task	Text should wrap	Does not wrap	Fail
7	Page reload	Tasks should persist	Does not persist	Fail
